M-1®
 Advanced
 Mildewcide Additive

INTERIOR and EXTERIOR

EPA Reg.No.1529-41-21346

- Inhibits Mildew, Mold, Algae
- Pre-measured dose for 5 gallons of paint or stain
- Clear in color
- Add to interior or exterior coatings
- Thin viscosity mixes easily
- Freeze-thaw stable
- Low odor – Low VOC
- Suitable for use in most oil and water-based log home coatings

M-1 Advanced Mildewcide can be added to interior and exterior coatings when additional protection is required to control surface mold, mildew and algae growth on the coating. M-1 will not hurt the environment and is non-toxic. It does not contribute to the odor or VOC of paint.

M-1 is recommended for use in coatings applied in high humidity environments and for applications where mildew has been a problem in the past. DO NOT treat over existing mold, mildew or algae. Always sanitize the substrate and clean thoroughly before re-coating. Prepare the surface prior to painting by cleaning and scrubbing with bleach, water and detergent. Rinse thoroughly. You may also use Outlast™ KleenStart. All visible signs of discoloration should be removed prior to re-coating. Eliminate sources of moisture whenever possible and increase air flow by cutting back shrubbery prior to re-coating. M-1 should still be working hard to protect the paint film after 3 years.
